

HTML & CSS Assignment

Question 1: Flipkart-style Product Card (Inline CSS)

Create an HTML file for a Flipkart-style product card and apply inline CSS to set a unique background color and font size for the product title only.

product-card.html

```
<!DOCTYPE html>
<html>
<head>
  <title>Flipkart Style Product Card</title>
</head>
<body>

  <div style="width:250px; border:1px solid #ddd; border-radius:8px; padding:15px; font-
family:Arial, sans-serif; box-shadow:0 2px 6px rgba(0,0,0,0.1);">

    

    <h2 style="background-color:#e8f5e9; font-size:20px; padding:6px; border-radius:4px;">
      Wireless Bluetooth Headphones
    </h2>

    <p style="color:#212121; margin:4px 0;">₹1,499 <span style="color:#388e3c;">(60% off)</span>
  </p>

    <p style="color:#ff9800; font-weight:bold;">★★★★☆ 4.2 (2,345 ratings)</p>

    <button style="background-color:#2874f0; color:white; border:none; padding:8px 16px; border-
radius:4px; cursor:pointer;">
      Add to Cart
    </button>

  </div>

</body>
</html>
```

Explanation: The product title (the `<h2>` tag) has inline CSS applying a unique light-green background color (`#e8f5e9`) and a distinct font size (`20px`), making it visually different from the rest of the card. All other elements use their own separate inline styles, but only the title carries this specific background/font-size combination.

Question 2: Myntra-like Offer Banner (Internal CSS)

Build a Myntra-like offer banner using internal CSS (inside a `<style>` tag) to set a custom font family, text color, and background color for the banner text.

offer-banner.html

```
<!DOCTYPE html>
```

```

<html>
<head>
  <title>Myntra Style Offer Banner</title>
  <style>
    .offer-banner {
      background-color: #ff3f6c;
      text-align: center;
      padding: 20px;
    }

    .offer-banner h1 {
      font-family: 'Trebuchet MS', sans-serif;
      color: #ffffff;
      font-size: 28px;
      margin: 0;
      letter-spacing: 1px;
    }

    .offer-banner p {
      font-family: 'Trebuchet MS', sans-serif;
      color: #fff0f3;
      font-size: 16px;
      margin-top: 8px;
    }
  </style>
</head>
<body>

  <div class="offer-banner">
    <h1>END OF SEASON SALE</h1>
    <p>Flat 50-80% OFF on Top Brands | Use Code: MYNTRA50</p>
  </div>

</body>
</html>

```

Explanation: The `<style>` tag inside `<head>` is internal CSS. It defines a custom font family (Trebuchet MS), a white/off-white text color, and a pink background color (`#ff3f6c`) similar to Myntra's brand color, applied to the banner's heading and paragraph.

Question 3: Zomato-inspired Buttons (External CSS)

Create a separate CSS file named `styles.css` and link it to your HTML file. Use external CSS to style all `<button>` elements with a Zomato-inspired color, rounded corners, and a hover effect that changes the background color.

`index.html`

```

<!DOCTYPE html>
<html>
<head>
  <title>Zomato Style Buttons</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>

  <h2>Restaurant Actions</h2>
  <button>Order Now</button>
  <button>Add to Favorites</button>
  <button>View Menu</button>

```

```
</body>
</html>
```

styles.css

```
button {
  background-color: #e23744;
  color: #ffffff;
  border: none;
  padding: 10px 20px;
  margin: 6px;
  font-size: 15px;
  border-radius: 25px;
  cursor: pointer;
  transition: background-color 0.3s ease;
}

button:hover {
  background-color: #cb202d;
}
```

Explanation: The external file `styles.css` is linked using `<link rel="stylesheet" href="styles.css">`. It styles every `<button>` with Zomato's signature red (`#e23744`), fully rounded corners (`border-radius:25px`), and a `:hover` rule that darkens the background to `#cb202d` on mouse-over.

Question 4: Spotify Playlist Item Styling (CSS Selectors)

Write CSS selectors to style all elements with the class 'playlist-item' (for a Spotify playlist page) to have a dark background and white text. Then, add a rule to highlight the currently playing song with a different color using a unique id selector.

index.html

```
<!DOCTYPE html>
<html>
<head>
  <title>Spotify Style Playlist</title>
  <style>
    .playlist-item {
      background-color: #121212;
      color: #ffffff;
      padding: 12px;
      margin-bottom: 4px;
      font-family: Arial, sans-serif;
      border-radius: 4px;
    }

    #now-playing {
      background-color: #1db954;
      color: #000000;
      font-weight: bold;
    }
  </style>
</head>
<body>

  <div class="playlist-item">Blinding Lights - The Weeknd</div>
```

```
<div class="playlist-item" id="now-playing">Levitating - Dua Lipa</div>
<div class="playlist-item">Shape of You - Ed Sheeran</div>

</body>
</html>
```

Explanation: The class selector `.playlist-item` applies a dark background (`#121212`) and white text to every song row. The unique id selector `#now-playing` is applied to only one element (the currently playing song) and overrides its background with Spotify's signature green (`#1db954`), making it stand out from the rest of the list.

Question 5: BookMyShow Light/Dark Mode Toggle

Implement a simple light/dark mode switch for a BookMyShow movie detail page using internal CSS and a toggle button. When the button is clicked, switch between light and dark color themes for the page (using JavaScript to add/remove a 'dark-mode' class on the body).

index.html

```
<!DOCTYPE html>
<html>
<head>
  <title>BookMyShow - Movie Detail</title>
  <style>
    body {
      font-family: Arial, sans-serif;
      background-color: #ffffff;
      color: #212121;
      transition: background-color 0.4s ease, color 0.4s ease;
      padding: 30px;
    }

    body.dark-mode {
      background-color: #121212;
      color: #f5f5f5;
    }

    .movie-title {
      font-size: 26px;
      font-weight: bold;
    }

    .toggle-btn {
      margin-top: 20px;
      padding: 10px 18px;
      border: none;
      border-radius: 4px;
      background-color: #c4242b;
      color: #ffffff;
      cursor: pointer;
      font-size: 15px;
    }

    body.dark-mode .toggle-btn {
      background-color: #f5f5f5;
      color: #121212;
    }
  </style>
</head>
<body>
```

```
<div class="movie-title">Pathaan (2023)</div>
<p>Genre: Action, Thriller &nbsp;  |&nbsp;  Duration: 2h 26m</p>
<p>An Indian agent races against time to save his country from a former ally turned enemy.</p>

<button class="toggle-btn" onclick="toggleTheme()">Toggle Dark Mode</button>

<script>
  function toggleTheme() {
    document.body.classList.toggle('dark-mode');
  }
</script>

</body>
</html>
```

Explanation: Internal CSS defines two themes: the default light theme on `body`, and a dark theme under `body.dark-mode`. A small JavaScript function `toggleTheme()` is triggered by the button's `onclick` event, and it uses `classList.toggle('dark-mode')` to add or remove the `dark-mode` class from `<body>`. Because the CSS rules are already defined for both states, toggling the class instantly switches all colors on the page, with a smooth transition applied via `transition` property.
