

Responsive Product Card Assignment

HTML + CSS | Flipkart-style card | Breakpoints: 600px, 900px, 1200px

Name: _____ Roll No.: _____ Date: _____

Note: The complete working code is also saved as `product-card.html`. Open it in any browser to see the card. The card uses a drawn phone graphic instead of a photo, so it works without an internet connection.

Question 1: Flipkart-style product card with a viewport meta tag

Create a Flipkart-style product card in HTML and CSS, then use a meta viewport tag so it scales correctly on mobile devices.

Code (product-card.html)

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <!-- Makes the page match the device width so it scales correctly on mobile -->
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Flipkart-Style Product Card</title>
  <style>
    * { box-sizing: border-box; margin: 0; padding: 0; }

    body {
      font-family: Arial, Helvetica, sans-serif;
      background: #f1f3f6;
      padding: 16px;
    }

    /* Default (desktop, wider than 1200px): image and details side by side */
    .card {
      display: flex;
      gap: 1.5em;
      max-width: 820px;
      margin: 0 auto;
      padding: 28px;
      font-size: 17px;
      color: #212121;
      background: #ffffff;
      border-radius: 4px;
      box-shadow: 0 1px 4px rgba(0, 0, 0, 0.2);
    }

    .card-image {
      flex: 0 0 38%;
      display: flex;
      align-items: center;
      justify-content: center;
      padding: 1em;
      background: #f7f8fa;
      border-radius: 4px;
    }
    .card-image svg { width: 100%; max-width: 150px; height: auto; }

    .card-details { flex: 1; }
    .brand { color: #878787; font-size: 0.8em; font-weight: bold; }
    .title { font-size: 1.15em; font-weight: 500; margin: 0.2em 0 0.5em; }

    .rating-row { display: flex; align-items: center; gap: 0.6em; margin-bottom: 0.8em; }
    .badge {
      background: #388e3c; color: #fff; font-size: 0.8em; font-weight: bold;
      padding: 0.2em 0.5em; border-radius: 3px;
    }
    .reviews { color: #878787; font-size: 0.8em; }
```

```

.highlights { margin: 0 0 1em 1.2em; font-size: 0.9em; line-height: 1.6; }

.price-row { display: flex; align-items: baseline; flex-wrap: wrap; gap: 0.6em; }
.price      { font-size: 1.7em; font-weight: bold; }
.old-price  { color: #878787; text-decoration: line-through; }
.discount   { color: #388e3c; font-weight: bold; font-size: 0.9em; }
.delivery   { color: #388e3c; font-size: 0.85em; margin: 0.3em 0 1em; }

.buttons { display: flex; gap: 0.8em; }
.btn {
  flex: 1; border: none; color: #fff; font-size: 0.95em; font-weight: bold;
  padding: 0.8em 1em; border-radius: 2px; cursor: pointer;
}
.btn-cart { background: #ff9f00; }
.btn-buy  { background: #fb641b; }

/* Media queries are added in Questions 2 and 3 */
</style>
</head>
<body>
<div class="card">
  <div class="card-image">
    <svg viewBox="0 0 120 220" role="img" aria-label="Nova X5 phone">
      <rect x="10" y="5" width="100" height="210" rx="16" fill="#1e3a8a"/>
      <rect x="16" y="14" width="88" height="192" rx="10" fill="#dbeafe"/>
      <circle cx="60" cy="24" r="3.5" fill="#1e3a8a"/>
      <rect x="26" y="50" width="68" height="40" rx="6" fill="#93c5fd"/>
      <rect x="26" y="100" width="68" height="8" rx="4" fill="#bfdbfe"/>
      <rect x="26" y="116" width="46" height="8" rx="4" fill="#bfdbfe"/>
    </svg>
  </div>

  <div class="card-details">
    <div class="brand">NOVA</div>
    <h1 class="title">Nova X5 5G (Ocean Blue, 128 GB)</h1>

    <div class="rating-row">
      <span class="badge">4.4 &#9733;</span>
      <span class="reviews">12,458 Ratings & 1,532 Reviews</span>
    </div>

    <ul class="highlights">
      <li>8 GB RAM | 128 GB ROM</li>
      <li>16.5 cm (6.5 inch) Full HD+ Display</li>
      <li>50 MP + 2 MP Dual Rear Camera</li>
      <li>5000 mAh Battery</li>
    </ul>

    <div class="price-row">
      <span class="price">&#8377;14,999</span>
      <span class="old-price">&#8377;19,999</span>
      <span class="discount">25% off</span>
    </div>
    <p class="delivery">Free delivery</p>

    <div class="buttons">
      <button class="btn btn-cart">ADD TO CART</button>
      <button class="btn btn-buy">BUY NOW</button>
    </div>
  </div>
</div>
</body>
</html>

```

Explanation: The card has an image on the left and the product details on the right (name, rating badge, highlights, price with discount, and Add to Cart / Buy Now buttons). It uses `display: flex` for the side-by-side layout and Flipkart's colours (green rating badge, orange and red-orange buttons). The tag `<meta name="viewport" content="width=device-width, initial-scale=1.0">` tells a phone browser to use the real screen width as the page width and

not to zoom out a desktop-sized page. Without it, a phone would show the card tiny and the media queries would not work as intended.

Question 2: Switch to a vertical layout at 600px or less

Add media queries so that when the screen width is 600px or less, the layout changes from horizontal (image and details side by side) to vertical (image on top, details below).

CSS added

```
@media only screen and (max-width: 600px) {  
  .card {  
    flex-direction: column; /* image on top, details below */  
  }  
  .card-image {  
    flex-basis: auto; /* remove the 38% width used in the side-by-side layout */  
    width: 100%;  
  }  
}
```

Explanation: The card is a flex container and its default direction is row (side by side). Changing it to column stacks the children, so the image comes first and the details come below it. The image box's width is set back to the full width of the card.

Question 3: Three breakpoints with different font size and padding

Set up three breakpoints (600px, 900px, 1200px) and change the card's font size and padding at each one to improve readability on different devices.

Values used

Screen width	Device	Font size	Padding	Layout
Above 1200px	Desktop (default)	17px	28px	Side by side
1200px or less	Laptop	16px	24px	Side by side
900px or less	Tablet	15px	20px	Side by side, image 40% wide
600px or less	Mobile	14px	14px	Stacked (image on top)

CSS added (all three breakpoints, including the layout switch from Question 2)

```
/* Breakpoint 1: screens up to 1200px wide (laptops) */  
@media only screen and (max-width: 1200px) {  
  .card { font-size: 16px; padding: 24px; }  
}  
  
/* Breakpoint 2: screens up to 900px wide (tablets) */  
@media only screen and (max-width: 900px) {  
  .card { font-size: 15px; padding: 20px; }  
  .card-image { flex-basis: 40%; }  
}  
  
/* Breakpoint 3: screens up to 600px wide (mobiles) */  
@media only screen and (max-width: 600px) {  
  body { padding: 8px; }  
  .card {  
    flex-direction: column; /* image on top, details below */  
    font-size: 14px;  
    padding: 14px;  
  }  
  .card-image { flex-basis: auto; width: 100%; }  
  .card-image svg { max-width: 120px; }  
}
```

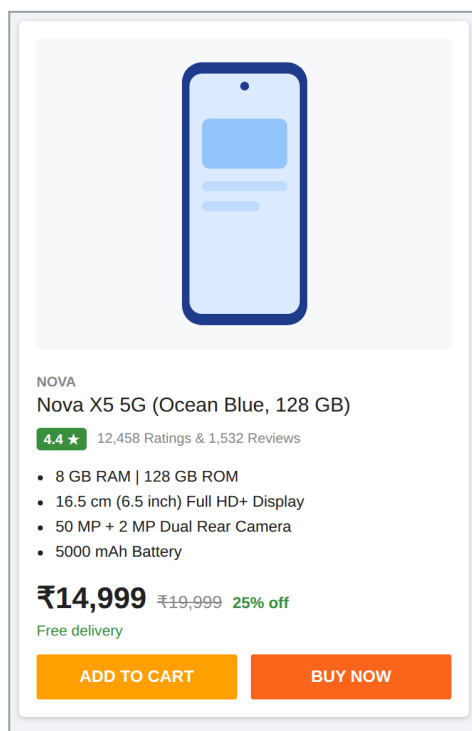

Explanation: The default styles are for the largest screens, and each media query overrides them for smaller screens using max-width. Because the queries come in order from 1200px down to 600px, a narrower screen matches several queries and the later (narrower) one wins. The font size and padding go down gradually so the card fits smaller screens, while 14px still stays comfortable to read on a phone. All sizes inside the card use em units, so changing the card's font-size scales the title, price and buttons together.

Question 4: Testing at mobile, tablet and desktop widths

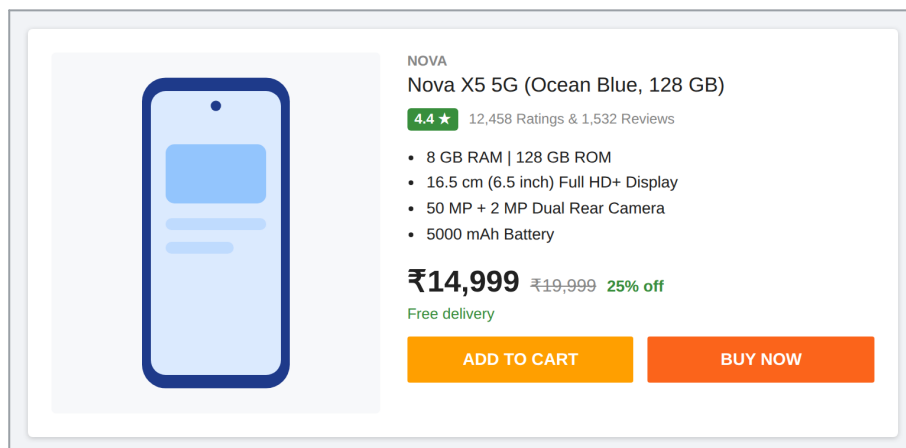

Test the card by resizing the browser window, take screenshots at mobile, tablet and desktop widths, and write a short note on what changes at each size.

Screenshots

Mobile (375px wide)

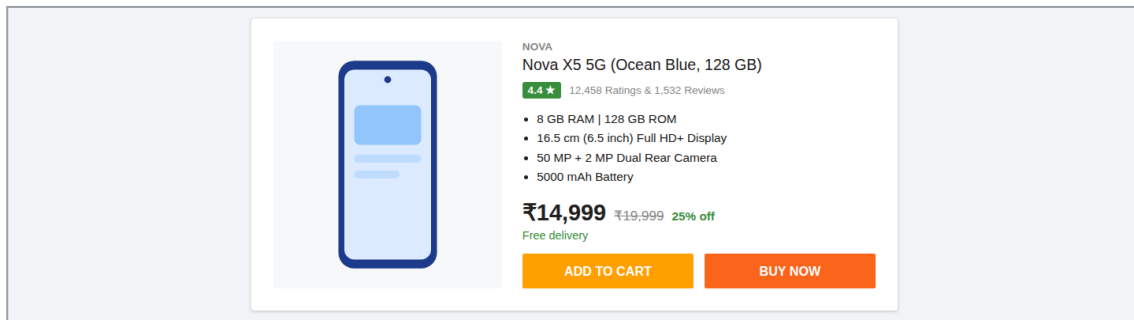

Tablet (768px wide)

Laptop (1024px wide)

Desktop (1440px wide)

Note on what changes at each size

Width	What changes
Mobile (375px)	The layout switches to vertical: the image sits on top and the details are below it. Font size drops to 14px, padding to 14px, and the phone image becomes smaller. The card fills the whole screen width and there is no sideways scrolling.
Tablet (768px)	The layout is side by side again. Font size is 15px and padding 20px. The image takes 40% of the card width and the card fills most of the screen.
Laptop (1024px)	Side by side with a 16px font and 24px padding. The card has reached its maximum width of 820px, so it is centred with empty space on both sides.
Desktop (1440px)	The default styles apply: 17px font and 28px padding, giving the roomiest and largest-text version of the card.

How to test in your own browser: Open product-card.html in Chrome, press F12 (or Ctrl+Shift+I), then click the device toolbar icon (Ctrl+Shift+M). Choose a device such as iPhone or iPad, or type a width like 375, 768, 1024 or 1440 in the size box, and take a screenshot. (A normal desktop browser window will not shrink below about 500px, so the device toolbar is needed for the mobile width.)
